binations and Permutations Math Is Fun

binations and Permutations What's the Difference? In English we use the word "combination" loosely, without thinking if the order of things is important.

Examples: Probability using Permutations and binations ...

We can use permutations and combinations to help us answer more complex probability questions. Example 1. A 4 digit PIN is selected. What is the probability that there are no repeated digits? There are 10 possible values for each digit of the PIN (namely: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9), so there are $10 \times 10 \times 10 \times 10 = 10^4 = 10000$ total possible PINs.

Unlike permutations, order does not count. Table 3 is based on Table 2 but is modified so that repeated combinations are given an "x" instead of a number. For example, "yellow then red" has an "x" because the combination of red and yellow was already included as choice number 1. As you can see, there are six combinations of the three colors.
