Prime Factorization Math Is Fun

Example 1: What are the prime factors of 12 ? It is best to start working from the smallest prime number, which is 2, so let's check: $12 \div 2 = 6$. Yes, it divided exactly by 2. We have taken the first step! But 6 is not a prime number, so we need to go further. Let's try 2 again: $6 \div 2 = 3$. Yes, that worked also.

Prime Factorization Calculator

Prime factorization or integer factorization of a number is breaking a number down into the set of prime numbers which multiply together to result in the original number. This is also known as prime decomposition.

What is Prime Factorization? Definition & Examples ...

Prime factorization is all of the prime numbers that multiply to create the original number. Prime number is a number that can only be divided by one and itself.
